Re: Fuel Management

Dear Membership,

Sk'atsin Silvatech Ventures (SSV) LLP, through Neskonlith, had applied for funding to complete on-reserve fuel management activities on IR2. The work included pruning, thinning, piling and chipping of ladder fuels and forest debris to reduce the risk of catastrophic wildfires within the community.

There are still a few piles of debris that must be burned.

You will notice two SSV employees burning up to 20 piles of debris. We may start burning these small piles as soon as Friday, October 30 and the burning may take up to two weeks to complete. The day we can start and those days that we can burn will be dictated by the venting index, so we may not be able to start on Friday and we may encounter days where we cannot burn. We may also be unable to burn the piles at all this fall, in which case we will return and burn the piles in the spring.

Please be cautious around SSV crew as we conduct fuel management activities. The crew will be actively burning piles. Watch for signage around our work areas and please give our crew space to do their work safely.

Please contact me if you have any questions,

Thank you,

Shane Vincenzi, Manager,

Sk'atsin Resources LLP.
