Memo

To: Neskonlith Band membership and community members.

Date: March 18, 2021

Re: **Prescribed burning on IR2**

Dear Neskonlith Band and community members,

A component of our wildfire fuel management activities on Neskonlith reserves includes prescribed burning. Prescribed burning is a planned understory burn on a specific area that has been chosen strategically to decrease the likelihood of a catastrophic wildfire.

One of these areas exists on IR2, south of the re-established fire break (as shown in the attached map).

Please be advised that a prescribed burn will take place on the area indicated on the map in the near future. The prescribed burn will be a collaborative activity between Neskonlith, Sk'atsin Silvatech Ventures LLP and the BC Wildfire Service.

Prescribed burns require optimal weather conditions (e.g. cool temperatures) and acceptable venting conditions that allow smoke to vent straight up rather than sticking close to the ground. These conditions are often present in the early spring.

An optimal weather window may present itself with little or no warning. We will endeavour to provide as much notice to the community as possible **but please expect this activity to happen on short notice.**

Please contact me if you have any questions. Thank you.

Thank you,

Shane Vincenzi, Manager,
Sk'atsin Resources LLP
